

Main gains: simpler decisions, clearer carries, and more predictable strike.

COURSE MANAGEMENT

Remove one side of trouble.

- Aim more often at the middle of greens.
- Let natural shot dispersion work for you.

SLOPES AND BALL FLIGHT

Slope changes the start direction.

- Ball above feet = ball flies left: grip shorter and aim slightly right.
- Take more club and swing softer to keep balance.

DISTANCE CONTROL

Rebuild trust in carry numbers.

- Regular course time in Mallorca and then Malaga will sharpen real carry awareness

FULL SWING PRIORITIES

Set up for cleaner compression.

- Hands and weight slightly more forward at address.
- Quieter move down / to the left; feel ball-then-ground contact (video to come!)

AROUND THE GREENS

Landing spot and slope decide the shot.

- Downhill landing zones or greens that are raised up will roll on and the landing point gets really small.
- Use a lower-running option when a high chip needs perfection is often the percentage play

SUMMARY

Good signs despite limited practice, warm-up, and unfamiliar clubs.

- Next focus: simpler targets, clearer carries, steadier strike and back on the range!
