

CHIPPING SETUP

No need to grip all the way down to the bottom of the club. Stand in a taller, more natural posture. Feet closer together will help stability and distance control without forcing an uncomfortable setup.

PUTTING RHYTHM

There is too much deceleration through impact. The backswing becomes very slow, followed by a push through the ball. Allow the putter to move with slightly more natural rhythm going back so the ball can be struck more cleanly and confidently.

FULL SWING — KEY POINTS

- Create slightly more space away from the ball at setup
- Make a shorter, more controlled backswing
- Keep the clubface less open throughout the swing

WHAT THIS WILL FIX

- Improve strike quality and consistency
- Reduce shots leaking out to the right
- Make the game feel more controlled and repeatable

SUMMARY

The focus going forwards is simplicity and control rather than forcing extra movement or speed. The foundations are there — a few setup and clubface changes should make the game feel much easier and more repeatable. A full-swing video follows with more detail.
